

SEMS Goal #5

The total weight of hazardous air pollutant (HAP) emissions is reduced to zero

Low-VOC paint stripping.

Accomplishments:

- Implemented Best Management Practices at the industrial maintenance facility paint booths.
- Substituted and eliminated the use of products containing methyl ethyl ketone (MEK) at the industrial maintenance facility for cleaning paint guns and thinning paints.

Vehicle paint booth operations at the industrial maintenance facility.

Future Initiatives:

- Design and build new, state-of-the-art paint booths at the industrial maintenance facility.
- Explore the formulation of conventional paint coatings.
- Install Stage II Vapor Recovery Systems on gasoline dispensers.

Questions:

What are some ways Fort Carson can pursue reducing HAP's even further?

How can we improve the tracking of hazardous product purchases used on Fort Carson?
